

## Experience the Power of 180° Viewing

Cover more with fewer cameras. OmniView technology gives you ultra-wide surveillance coverage with a single device—eliminating blind spots, reducing costs, and simplifying installs.

**Up to 180° field of View** – capture everything from edge to edge with a single device.

**Wide Angle View** with Standard 2.8mm Fixed Lens Camera

## Why choose OmniView

Covering wide areas is a challenge with traditional 2.8mm fixed lens cameras, which often require multiple units and complex installations. That means higher equipment and labor costs—and more chances for blind spots.

OmniView cameras change that. With advanced 180° lens technology and multi-sensor stitching, you get full panoramic visibility from a single device.

## Perfect for:

- Parking lots
- Perimeter fencing & gates
- Commercial warehouses
- Stadiums and arenas
- Shopping centers
- Intersections and open spaces

## Simplified Installation & Cost Savings

- Fewer cameras required to monitor large spaces
- Less cabling and infrastructure
- Lower installation and maintenance costs
- Streamlined network design

Whether it's for new builds or retrofitting legacy systems, OmniView makes it faster and more affordable to get full-area protection.

## Conclusion

OmniView delivers the wide-angle clarity your projects demand—without the complexity. Whether you're covering a large site, simplifying a retrofit, or designing a smarter system, 180° cameras give you the edge.
